Functional Improvements & Enhancements

Search Improvements

End user research indicated that improvements to InCenter search represent the most requested InCenter enhancement. Several PMS organizations polled various user groups and collected feedback from a wide variety of geographic locations and modalities. The predominate theme, regardless of user role, location or area of interest, was that InCenter search improvements were needed.

The search enhancements in this release are the second in a series of changes made to improve search usability

Search Results format

- Search results are now displayed within a standard InCenter document grid. The document grid
- The user will be able to sort on all columns once the grid has been rendered. The default grid sort is on score.
- The default summary has been replaced with the Author's description if an author description is available. If no description is available then just the title will appear in the Title/Description column.

Search Results

		Score ▲	Title/Description ▲	Document Type ⬍	Date Created ⬍	Publication # ⬍	
1-		100	**Excerpts Worth Knowing from Competitive User Guides**	Pitch These Points	01-May-2006	none

What's New

A second request from users was a "What's New" feature. This was a feature on the legacy Sales & Marketing system; Service Library users also requested this functionality.
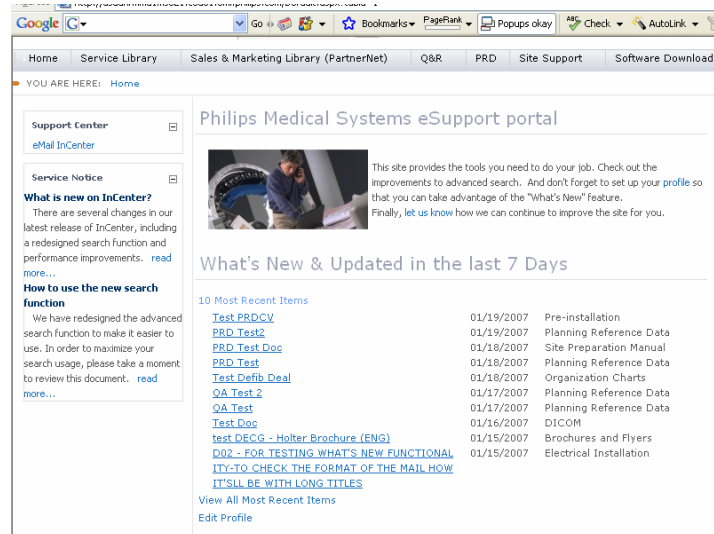

The "What's New" feature allows users to view a list of new documents online and to receive a daily or weekly updated listing via email. Users must setup their preferences in order for What's New to function. All users were sent instructions via email; a copy is also available online **by clicking here.**

NOTE FOR SERVICE USERS: Preferences selected for What's New online will NOT change your IST entitlements, nor will they affect the What's New application for OFFLINE Media.

Online Notification Module

What's New listings are available on the InCenter home page, on each Customer Service product home page and on each Sales & Marketing product home page. The listing on the InCenter home page will include all InCenter content that the user is entitled to access, assuming that the user has selected all available items in their What's New profile. The product home page listings will include content specific to the modality and business function of the product home page. For example, a What's New listing on the Customer Service Cardio Vascular home page will include Customer Service content associated with Cardio Vascular.

The on-line What's New listing will include new and updated content added within the last seven days. The user will be presented with a list of the last 10 items added to InCenter, as well as a link to a listing of up to the last 200 items added to InCenter within the last seven days. The list has been limited to 200 items for performance reasons. It is suggested that the user refine their profile if they consistently exceed 200 items in their listing.

Email Notification

- ### HTML Format

The format of the What's New email was developed in accordance with Philips Corporate email electronic communications guidelines. The HTML email format will contain hyperlinks to InCenter documents as well as links directly to InCenter for modifying the user's What's New profile. The listing will include title, author's description, file type/size and document type.

Text Format

The text version of the What's New email contains the same information as the HTML format without the images and text formatting design elements associated with the HTML version. The text version should be selected when email performance and/or email storage is an issue for the user

CSIP Level 0:

Profile

The user profile has been extended to allow the user the ability to personalize their What's New listing and email notification. The user must set up their What's New profile before content is available in their What's New listing and before receiving email notifications.

The user can select the types of documents that will appear in their What's New listing. The document types selected here will affect both the What's New listing online as well as the document types that will be included in the user's email notification (if selected).

The user can select the products, systems or system releases that will appear in their What's New listing. Selecting a modality will automatically include all systems within the selected modality. Selecting a system will include all releases within the selected system.

Only the product groups/systems that are included in the user's InCenter entitlements will be available for selection in the What's New profile. The product groups/systems selected here will affect both the What's New listing online as well as the product groups/systems that will be included in the user's email notification (if selected).
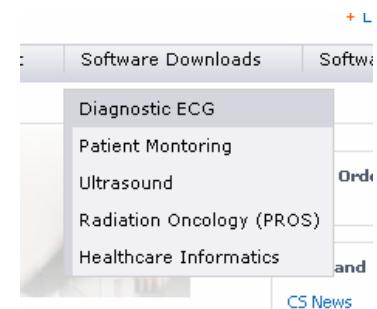

The user can specify:
- If they wish to receive email notifications
- How often they will receive email notifications
- Their preferred email format

Issue(s) Addressed In This Release

(NOTE: Depending on your role, the changes below may or may not apply)
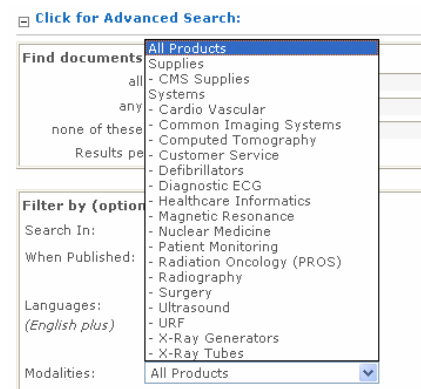

Roles for software downloads

Additional logic has been added to InCenter that will limit access to the Software Download modality menu items. The IST user administrator does not have to take any action. The Software Download menu items will appear (or not) based on the same logic used for the CS library. For example, if a user currently has access to just the Patient Monitoring modality and the Software Download library then the other (non Patient Monitoring) Software Download menu items will no longer appear.

CMS supplies missing from Search

The CMS Supplies product line was previously unavailable from the advanced search. This oversight has been corrected in this InCenter release.
